

# Alphabeta Theory (AB-theory)

A basic physics Theory of Everything (ToE) bottom-up single-line diagram with ToE equation by Robert Franklin

Orders of Magnitude

$$m=tc^{2*}$$

Different Levels of Matter

24. Diamonds (atomic matter).  
*Realm of other matter/preatomic/post-atomic parallel universes (example: motaic matter (atom spelled backwards))*
23. Diamond molecule (atoms).
22. Atom (protons, neutrons, electrons) forms when preatoms compress after being packed with force and field particles.  
*Realm of Superverses (Big Bang) Type III Supertachyon\*\*\**
21. Electron (hyper-compressed preatom).
20. Quarks (compressed preatoms/three per proton-neutron).
19. Emitted photon beta particle packed with multipartite alpha subvectors. (note: if used as a graviton it will scorch life forms including plants.)
18. Preatomic/post-atomic nucleus with preproton/post-proton, preneutron/post-neutron and preelectrons/post-electrons (pyrams).
17. Pyramidal waves (atomic/post-atomic life form thought medium).
16. Inanimate decompressed post-atom splits away from preatom (semi-packed supersphere/Schrodinger's inanimate 2D bosonic cat).
15. Animate decompressed post-atom splits away from preatom (semi-packed supersphere/Schrodinger's animate 2D bosonic cat).
14. Higher-dimensional hyperbetacule forms into supersphere 'preatom' with packed alpha subvector field (dark matter/micro black hole).
13. Twin-cone betacule forms into higher-dimensional hyperbetacule.
12. Tubular betacule or two single-cone betacules form into twin-cone betacule.
11. Flat betacule forms into tubular or single-cone betacule (fermionic field).  
*Realm of Supercubes (Little Bang) Type II Supertachyon*
10. Emitted force carrier beta particle packed with betabits and partite alpha subvectors (Higgs boson/graviton {Franklin Gravity}/micro black hole/superbeta/preatomic photon/etc.).
9. Flat betacule field/subfield packed with betabits and alpha subvectors (dark energy/Higgs field/spacetime fabric/superbetacule).
8. Gravitational Wave (Einstein Gravity).
7. Flat beta particle packed with betabit field, alphacules and wavy alpha subvectors (digital information/bosonic field).  
*Realm of Alphatrons (Teeny Weeny Bang) Type I Supertachyon*
6. Wavy open alphacules.  
*"Holy Ghost (Spirit of God)"*
5. Wavy open superluminal alpha vector created by Type I-V Supertachyon(s) (linear information/boson and fermion free).†
4. Tachyons (Itty Bitty Bangs/something from somethingness) created by I.C.E. (Supergrand Unification/Lorentz four-vectors).
3. Betabit field created by tachyons/supertachyons/alpha vectors.
2. Alphabit field created by tachyons/supertachyons/alpha vectors.
1. ∞ I.C.E. (Infinite Cold Energy/somethingness/quantum fluctuations).

\*ToE equation: Mass equals temperature within a vacuum times the velocity of light squared.

$$m=f\left(\frac{\text{coldness, silence \& darkness}}{\text{reversed \& pressurized}}\right) = \text{heat, sound and light within a vacuum.}^{**}$$

\*\*Mass equals the function of extreme coldness, silence and darkness reversed and pressurized.

\*\*\*Cold Black Holes & Cold Black Stars Type IV & V Supertachyons not listed.
